EXPERIMENT

Title

WEEK 11B

Description

11.Write R program to find the following Distribution with the sample data and visualize the linear regression graphically.

b) Binomial Distribution

Procedure and Overvation:

Binomoial Distribution:

The binomial distribution deals with find the probability of a success of a event which has onlytwo possible out comes in a series of experiment.

Tossing of a V always gives a heads or tails. The probability of finding of 3 heads in tossing a coin repeatedly for 10 times estimated during the Binomial Distribution.

probability of failure for 1 trail

* The mean of binomial distribution is np and variance of binomial distribution npq.

* Binomial probability using R,R as four inbuilt functions to generate binomial distribution.

They are described below:

1.dbinom(X, size, prob)

2.pbinom(X, size, prob)

3.qbinom(X, size, prob)

4.rbinom(X, size, prob)

X is a vector of numbers.

p is a vector of probability.

N is the number of observations.

prob-is the probability of success of each trail

Source code:

dbinom:

```
#create a sample of 50 numbers which are incremented by 1.
x <-seq(0,50,by=1)
#create the binomial distribution
y <-dbinom(x,50,0.5)
#Give the chart file a name
png(file="dbinom.png")
plot(x,y)
dev.off()
```

pbinom:

```
x<-pbinom(26,51,0.5)
print(x)
```

qbinom:

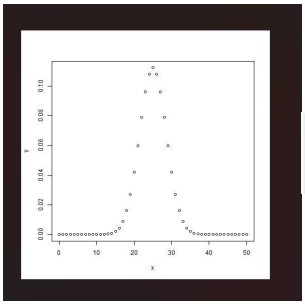
```
x<-qbinom(0.25,51,1/2)

print(x)
```

rbinom:

```
x<-rbinom(8,150,.4)

print(x)
```



VIVA RESPONSES

Q) The Process of describing the data that is huge and complex to store and process is known as ___.

Big data

Q) In descriptive statistics, data from the entire population or a sample is summarized with ___.

Numerical descriptor

Q) Customer behavior analytics is about understanding how your customers act -

True

Q) Data Analysis is defined by the statistician?

John Tukey

Q) Amongst which of the following is / are the challenges overcome by the data strategy to make a business in a strong position -

All of the mentioned above
